# QuickPaste

Thank you for your using QuickPaste.

1. Introduction

QuickPaste is an image processor that allows the user to batch-watermark any number of graphic files with a smaller image (as opposed to text). You can also import any number of watermark images to the sidebar so that QuickPaste remember them and can give you quick access to them. Simply, drop a background image as a sample onto the drop box and then import, set and position a watermark image. Finally, choose Export and list any number of source files on which to watermark. Whether you have 10 or 100 images to watermark, QuickPaste can do the job quite fast.

2. Installing QuickPaste

You can give it its own folder if you like, or just drag and drop a copy of QuickPaste anywhere even inside a USB drive. And you are all set. If you have installed and used the trial version of QuickPaste, it is not necessary that you delete the application. You can also keep the trial version of QuickPaste if you have it though we we recommend that you trash it with its application data folder.
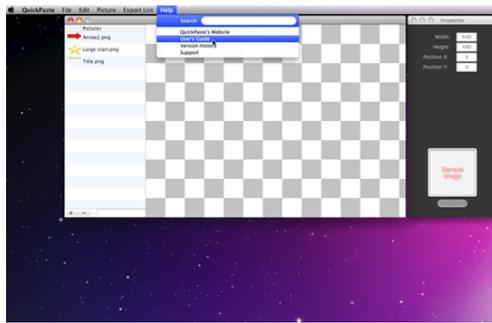

3. Uninstalling QuickPaste

When launched for the first time, QuickPaste creates a folder containing several files inside the Application Support folder, which you need to trash on top of the application file itself. You can easily locate this folder by opening **Preferences** and switching tabs to **System files**.

4. Using QuickPaste

User's Guide is available online at http://www.mhvt.net/quicktime/eng/quickpaste/usersguide.php so that we can update you whenever necessary.

5. Support

If you have any trouble with QuickPaste or have questions or suggestions, please go to MacHouse Blog (http://machouse.mhvt.net/?p=1865). You can also contact us by opening a support ticket at MacHouse Support (http://support.mhvt.net/) only if privacy needs to be protected.

QuickPaste is a product of MacHouse.
