

SwatchAble

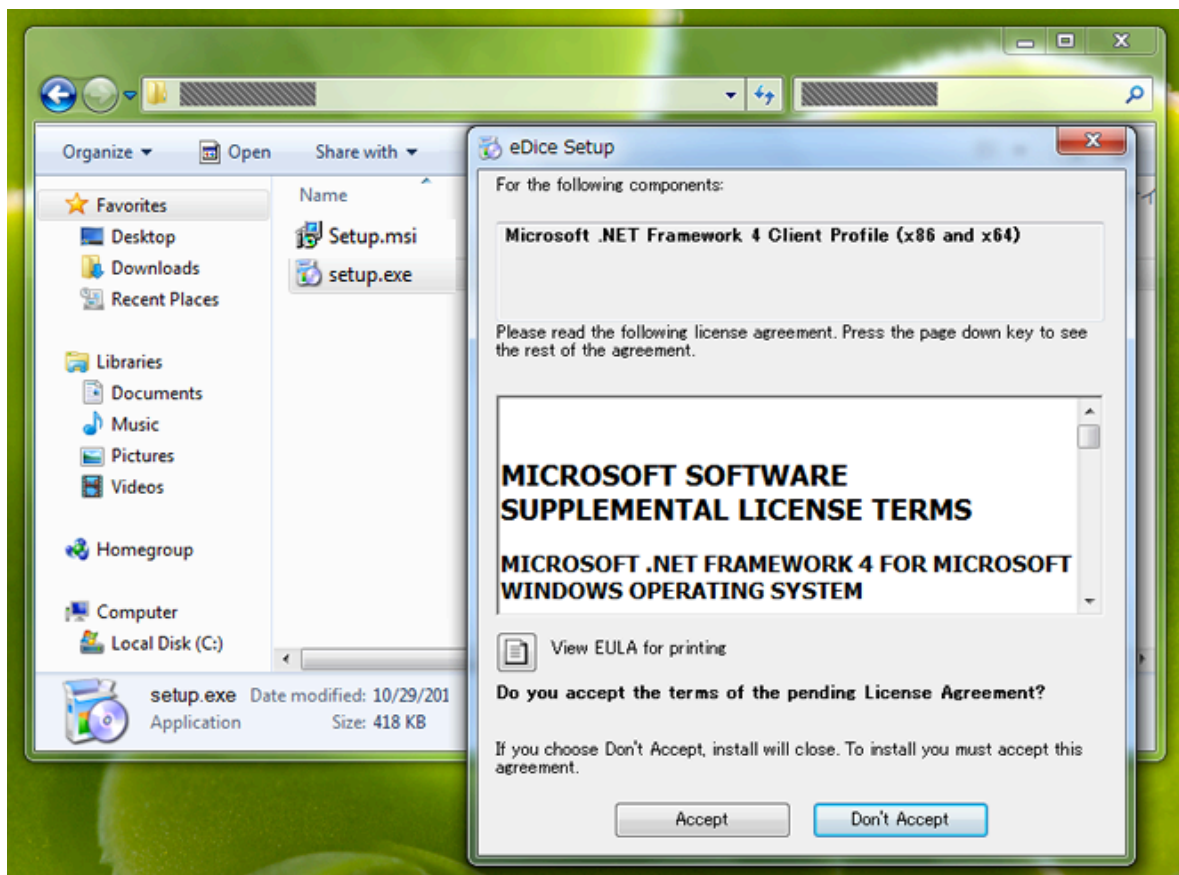

Thank you for your using SwatchAble.

1. Introduction

SwatchAble lets you create swatch collections of your own right out of image files. SwatchAble will automatically remove duplicates. So each swatch collection consists of unique colors within itself. Click on any of the colors in the list, and you will get its color values in the HTML, RGB, HSV representations. Furthermore, after selecting a color, click on the Add button to send its color profile to the Colors list. Choosing File > Export Colors, you can export swatch files.

2. Installing SwatchAble

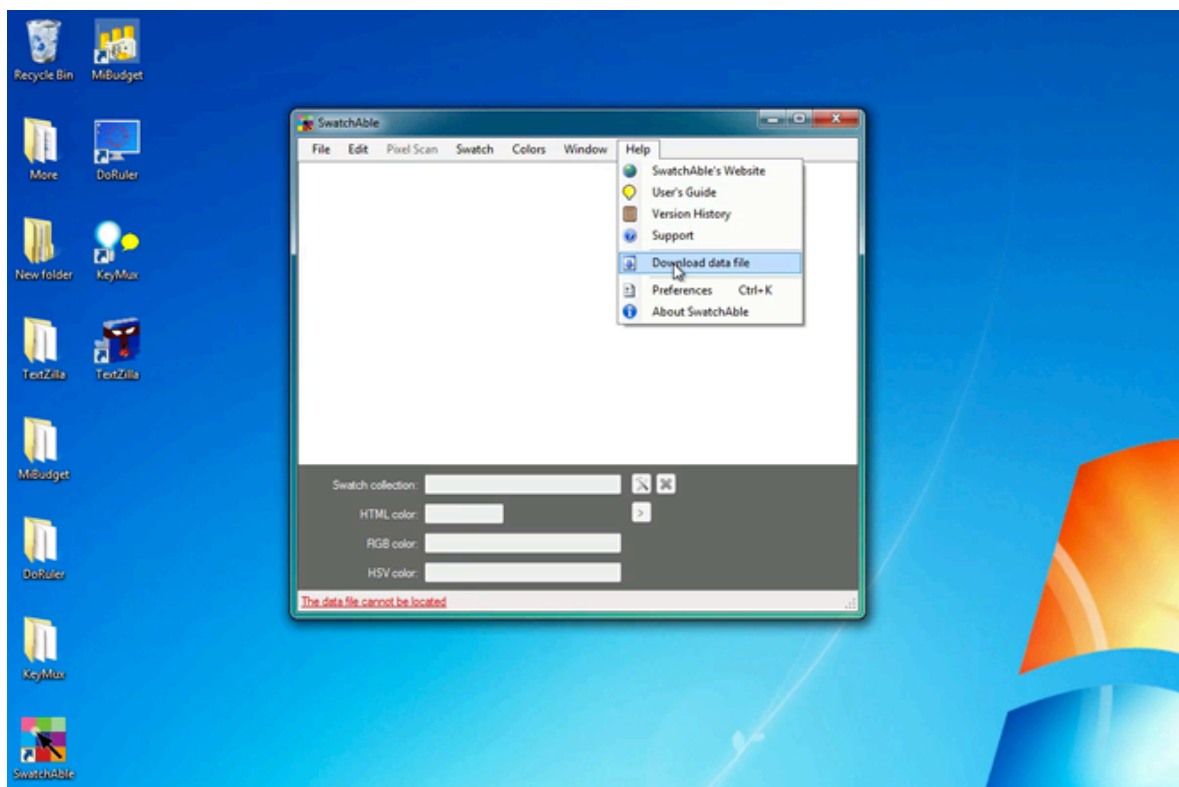

Double-click on **setup.exe** in the delivery package initiate the installation process. If your computer doesn't have it yet, SwatchAble will first attempt to install **.NET Framework 4**, and you will be prompted for confirmation. (See Screenshot 2.) Then you will proceed to install SwatchAble. You can use **Setup.msi** to install the application as long as you already have .NET Framework 4, which SwatchAble requires. You can find the application at the following path: C:\Program Files\MacHouse\SwatchAble.

Screenshot 3 (from another software title)

When you launch the application, you will see a status message in red

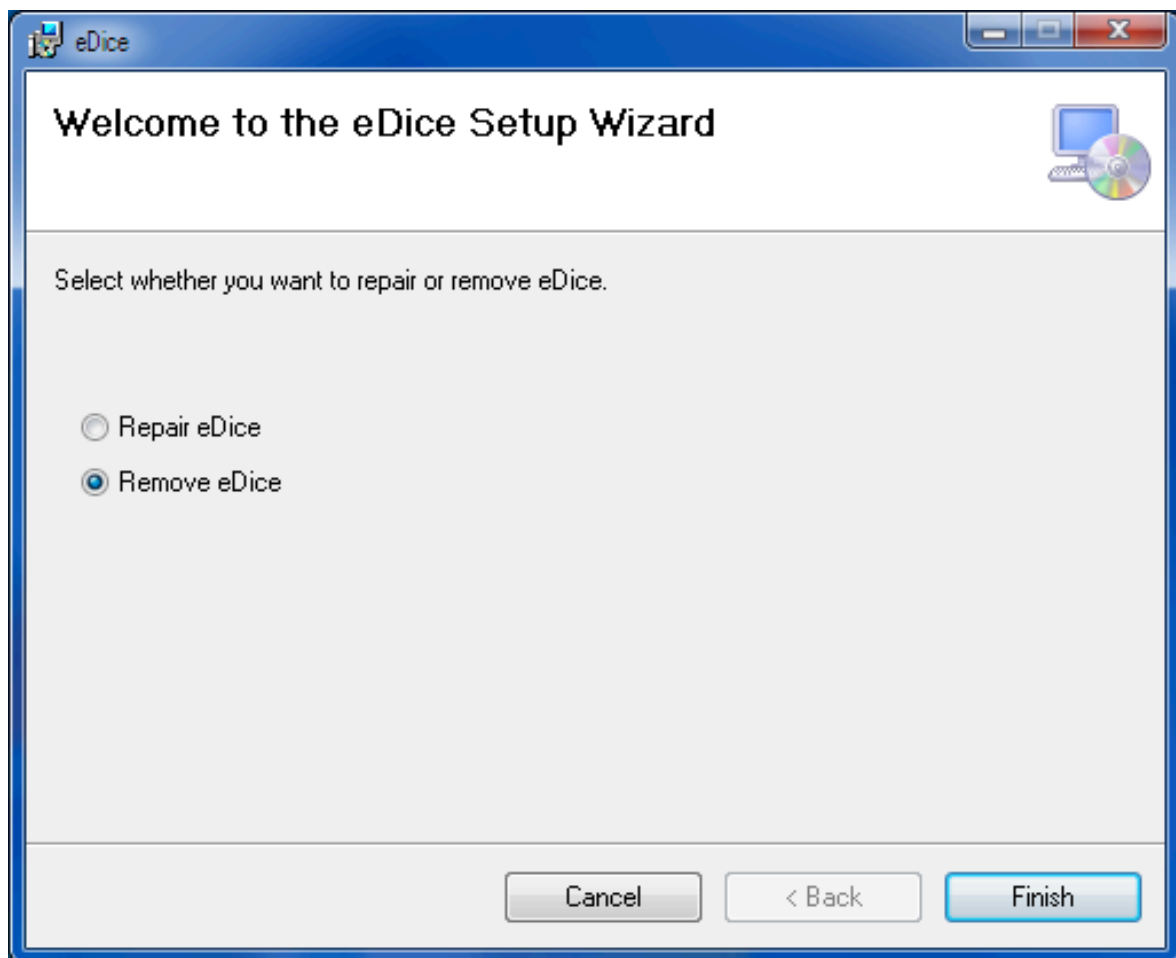

at the bottom of the window. This application requires a database file to begin with. So choose Help > Download data file to download it. Then click on the status message, and you will be prompted to locate the database file. After successfully letting the application copying the file, restart the application.

Furthermore, note that this application requires Microsoft Access Database Engine 2010 Redistributable (64-bit) to read the Access database file. If your computer doesn't have Microsoft Excel or Microsoft Access installed, you may be required to download the database engine installer from Microsoft's web site. And you will be prompted to download the installer package when you launch the application.

3. Uninstalling SwatchAble

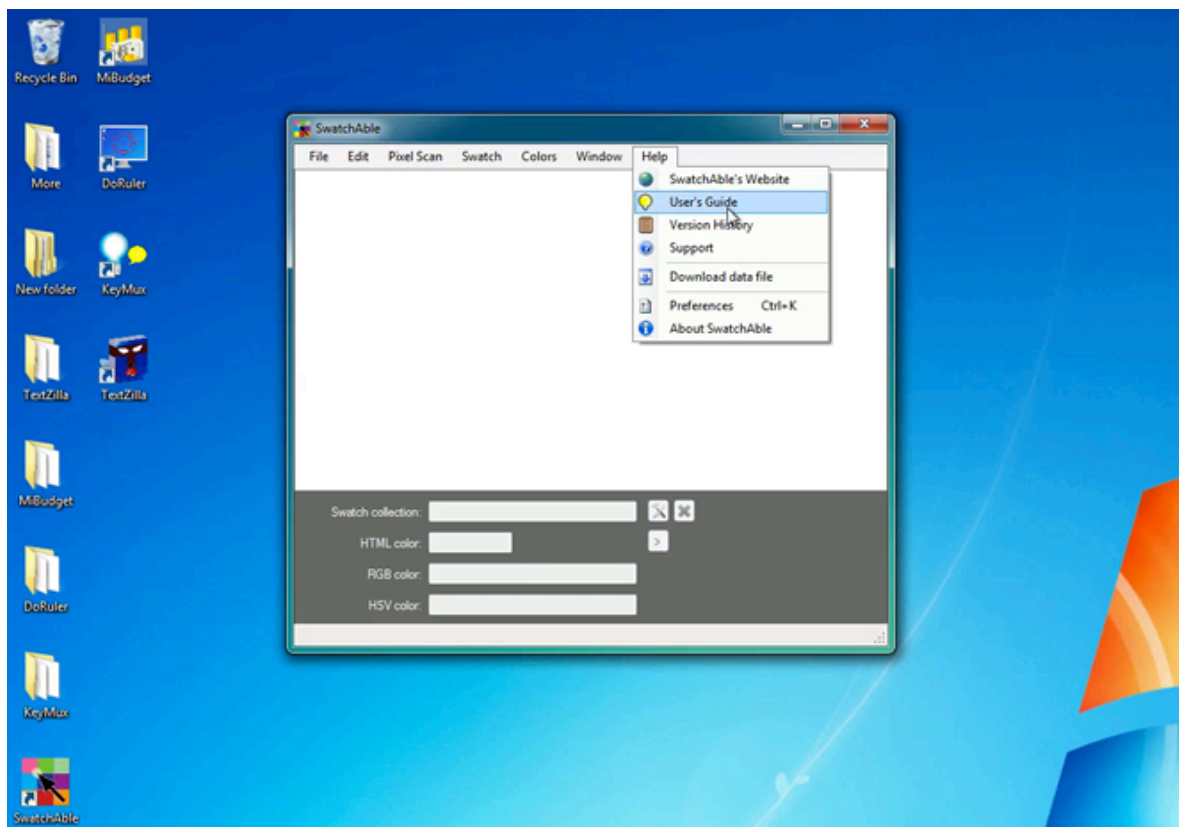

Open Control Panel and choose Uninstall a program. Then double-click on SwatchAble to initiate the uninstalling process. (See Screenshot 3.) You can also use the original setup.exe or setup.msi to uninstall the application. (See Screenshot 4.) Additionally, when it starts up for the first time, the application will create a folder, which you need to manually trash. You can locate it easily by opening Preferences and navigate to the System tab.
